

Pad Cooling Made Easier.

The Trough Makes the Difference

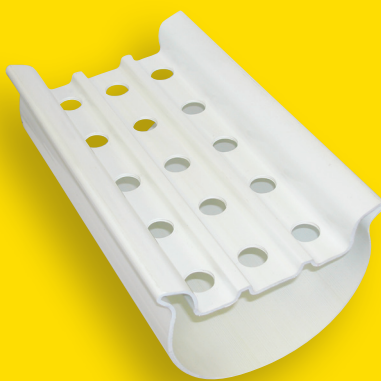

VAL-CO® is proud to introduce the Oasis™ water return trough and evaporative pad support system which has the latest in evaporative pad cooling technology. This proprietary system is manufactured by VAL-CO and uses a unique, raised ribbed pad tray, molded directly into the trough which keeps the pad elevated above the drain holes allowing for 100% drainage with no spill-over from the tray. The design of the Oasis trough greatly reduces installation and maintenance time with its unique quick-connect coupler and full 8" cleanout at the end of the trough.

Other features and benefits of the Oasis System:

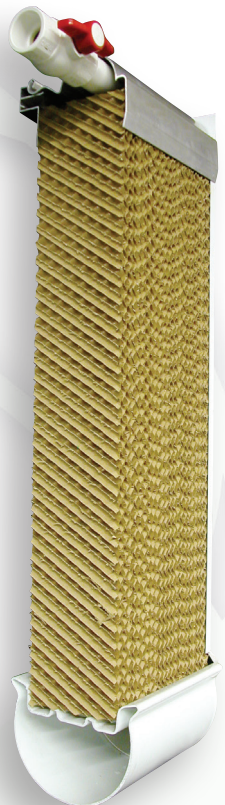

- Unique combination of pad and trough allows for years of trouble free use.
- Quick connect coupler facilitates installation and provides flexibility for different length systems.
- On-ground storage with minimum set-up time.
- Easy-access top metal cover reduces service and maintenance time and directs all of the water onto the pad.
- Self-contained holding tank keeps foreign material out.
- Eliminates the need for metal troughs with liners and metal pad support trays.
- Large capacity basin for ample water supply.
- Both Open and Closed Top configurations available.

The Oasis Evaporative Pad Cooling System is a complete system available in 2 models: Extended, which allows for the pad material to be off-set from the wall by 10" and Flush, for direct installation onto the wall.

Call your local VAL-CO representative or distributor for more information on this and our other fine products.
